**FOR IMMEDIATE RELEASE**

**Air Technology Engines Announces Expansion**

*(Naples, FL – July 9, 2012)* Expansion is underway at Air Technology Engines in Naples, Florida. Due to the increase of repair and overhaul business, Air Technology is expanding manufacturing space as well as hiring.

Air Technology Engines is an authorized Honeywell T53 Service Center which overhauls and upgrades gas turbine engines, helicopter transmissions and dynamic components used in firefighting, armed forces and law enforcement helicopters.

In the first phase of its 5,000 square foot expansion, the shop floor will increase its turbine engine products. The line of repair includes compressor components, accessory gearboxes and gear drives. The anticipation of more product lines is in the future.

Over the past year, the shop personnel have doubled and plans are in place to continue the hiring trend. Equipment and services have expanded to include CNC, jig grinders, and additional cleaning lines.

Air Technology, which specializes in maintaining all models of the T53 engine, as well as main transmissions and major components for the Huey UH1H, 205, 212, 206, OH58 and AH1 helicopters, is currently seeking experienced T53 mechanics and inspectors to meet growing demands.

“With our expert engineering support and technology, we strive to provide fast and efficient services to helicopter operators worldwide,” says Mike Turner, President of Air Technology Engines. “We are very pleased to be growing in all areas of our business and we hope to employ more people in the near future.”

Air Technology Group has supported the aviation industry for over 35 years with a world-class reputation for providing fast, efficient services to its clients.
